

Assignment 2: Best Practices

Software Engineering for Scientists

Objectives: Become familiar with best practices.

Instructions:

We are going to update the last assignment so that it conforms to our best practices. Make sure your changes follow the proper Git workflow. All of this can be done in one branch, but each task should be its own commit.

Tasks:

1. Create a new mamba environment
 - a. Install `pycodestyle`
 - b. Export your environment and add it to your repo
 - i. `mamba env export --from-history > environment.yml`
2. Update `print_fires.py` to take the command-line arguments using `argparse` for
 - a. `country`
 - b. `country_column`
 - c. `fires_column`
 - d. `file_name`
3. Update `get_column` to return a list of integers and catch possible exceptions when opening files and converting values to integers
4. Update `run.sh` to use these command-line arguments. Include three examples of running `print_fires.py`, one that works and two that give errors.
5. Write a good `README.md`
6. Create a release from master tagged as `v2.0.0`
